To create a secret code or cipher, start by writing the letters A through M in one row and the letters N through Z in another row underneath. Then, replace each letter in your message with the letter above or below it to encode your message.

5 Ways to Create Secret Codes and Ciphers - wikiHow

Ciphers, on the other hand, convert the message by a rule, known only to the sender and recipient, which changes each individual letter (or sometimes groups of letters).Ciphers, are significantly easier to use than codes, since the users only have to remember a specific algorithm (a mathematical word for process) to encrypt the message, and not a whole dictionary of codewords.

Codes and Ciphers - Crypto Corner

A code involves simple translation. "ABC" is code for "Hello There!" A cipher is like a mathematical function, you input something and get an output. I input "ABC" into the cipher and it outputs "Hello There!". Code is more direct, you just look up what something means. A cipher is a way of translating the code without having everything listed out.
