The ratio of the number of cells in mitosis to the total number of cells. Prognostic tool A method of predicting the future growth of cancer cells. (e.g. mitotic index) To do: 1. Navigate to The virtual lab: The Cell Cycle and Cancer 2. Read Purpose, objectives and procedure in the ^Question \_ column on the left side. 3.

### **Using the mitotic index as a prognostic tool in cancer ...**

The cell cycle is a sequence of events that make up the life of a typical eukaryotic cell, from the moment of its origin, to the time it divides to produce two daughter cells. Interphase starts off the cell cycle and it is the longest stage in the cell cycle. Most cells spend 90% or more of their life span in interphase.

The team knew that many cancer treatments work by impairing cancer growth by affecting the cell cycle, which usually resulted in the cell's termination. They tested GSK3 $\beta$  inhibitors and found that they stalled cancer cells during the cell cycle. These cells were then confirmed to be terminated by apoptosis (a cell death pathway).
